DETAILED ACTION

Allowable Subject Matter

Claims 1-48 are allowed.

Regarding independent claims 1, 20 and 34, the closest prior art to the instant invention is Johansson (USP 3,540,324). JOHANSSON teaches a backspot facing tool comprising a shaft having a first and a second end, a recess located near the first end having a first and second transverse surfaces that are generally parallel to each other and perpendicular to the first axis, the shaft having an outer circumference and being centered on said first axis (first axis being the center of 22: see figure below) and a cutting element (24) having an inner and outer portion and being provided with a pivot point (20: pivoting about a second axis) ('324, figures 4 & 5 and Col. 3, lines 64+). JOHANSSON also teaches cutter element (24) being movable between a closed position and an open position ('324, Col. 4, lines 3-12). Furthermore, JOHANSSON teaches the first axis (AX1) and the second axis (AX2: see figure below) being parallel.

However, regarding claim 1, JOHANSSON fails to anticipate or make obvious the inner surface of the cutting element forming a negative shear angle (α) with a plane intersected by the first axis (AX1) and the second axis (AX2). Regarding claims 20 and 34, JOHANSSON fails to anticipate or make obvious the cutting element having an intermediate position between the closed and open position.
